

Mildred Avenue Special Assessment District

The construction plans are out for bid and the bids will be received and publicly opened at the offices of the Monroe County Road Commission on July 26, 2018 with a completion date this construction season.

This work will include milling off the existing old sealcoat and patched surface on the roadway and placing a 25 ft. wide asphalt overlay on to road, including placing millings and gravel at the easterly turnaround at the end of the street. The new asphalt roadway will tie into the existing paved driveways, generally varying between 1 and 4 ft. off the road, depending on the condition and location of end of the existing asphalt or concrete driveway. Stone driveways will have additional stone added to match into the new asphalt.
